All Rights Reserved. Designated trademarks and brands are the property of their respective owners. It is normal to put the conditioner in the smallest compartment, be it C or D. Please rate my solution. Thanks. Its like spades. You have 4 players in teams. Every person takes 7 dominoes and you have to play tricks that each count for 1 point. Anything with a multiple of 5 dots. I found a video that has a domino line with 4,400 dominoes!!! check it out here General rules do not include having to say dominoes in order to go out. However, there are tons of house rules, <http://asianmosaicnyc.com/userfiles/dillon-550-manual-bullet-feeder.xml>

- **candy domino 4x4 user manual, 1.0, candy domino 4x4 user manual.**

If four are playing the game, it may be played as a partnership the two players sitting opposite one another are partners Answer questions, earn points and help others. I have a question and I hope that you can help me out. Does anyone have pictures, ads, videos, etc of Candy washing machines from the 50,60,70,80 years. It would mean much to me if you could send that to my email or put it here in the forum. Thanx. I have this pic which might be of interest. Rob A number of mates of mine had parents who owned Candy machines, but I cant for the life of me remember much about them although I think one was a late 70s machine. Pictures seem to be few and far between. I am keeping an eye on this thread in the hope, like you, that some real gems will be posted. The only two pics I have of candy machines are attached. This machine or one similar was sold in the UK as Model D2.50 with an 800rpm spin speed Now, I have a D4.109X, Aquamatic 3, WD28, WD39, 133, P8.61X, and a P5.03X. The one which I grew up with, was my aunts, and that was a D4.104X. I have the booklet some place here, but cant find it now. The machines I throwed away, was a Alise WD27, D4.60X, D4.82X, and a D4.109X, which I used for some years before it broke down. If so, have you ever encountered the first Aquamatic I am rather perplexed by the door. I have a Which consumer magazine report from 1976 with a line drawing of one and the door looks like it opens downwards!! Some info on it could have the Heliomatic dryer stacked on top of it 3kg wash load spin speed 400rpm detergent dispenser in the door cotton wash was graded FAIR synthetic creasing was graded MODERATE overall noise was graded ACCEPTABLE spinning efficiency was graded VERY POOR Like Nikola, I would love to know more about 60s, 70s and 80s Candy machines. Cheers Paul Now its time to write, because this post calls me. Ive a Candy Automatic 3 to restore, here attached you find a photo. <http://www.casaperferiesantamariagoretti.com/writable/public/userfiles/dillon-650-manual-esp>

[a-ol.xml](#)

Now shes completely disassembled in pieces, and Im repairing and finding spare parts. And, thank to a real friend, Ive got one. Ill inform you about progress in restoration. Bye Rijk. COMPLIMENTS! Congratulations and have a nice work on it with the restoration. Nik write to me by email and I didnt remember indeed to address him to you having a Candy. a Mrs Candy like this. Bye Diomedea PS I link sono quelli che un mio amico Daniele aveva postato sul blog. My Aquamatic does 550rpm. The aquamatic on the pic isnt the one I have, because mine is in parts at the moment, because the spider on the drum shaft is broken, but its exactly like the one on the picture. It was an interesting washer, infact the programm dial under the little plastic cover it was strange. Interesting was the detergent dispenser integrated into the door. Timon can you post some other pictures of this machine and detergent dispenser thanks The drum is 5 cm deeper than A3s, the heater is longer and maybe the motor more powerful, but all the rest is identical. Same programs and aesthetic. The timer is red, and the functioning you described is correct. The version I have is without the detergent hole, which was under the blue cover, but removed after the first production model because it caused condensation problems on the timer. Here is a photo Like Filekar1 would love to see more pic of this machine. It looks exactly like the machine which is in my 1976 copy of the consumer magazine Which that door mystery is definately solved. Can any UK based members confirm whether the brown facia colour scheme was the same on UK sold machines. A bit more info cold fill only 400rpm spin stacks with Heliomatic MkII dryer any images guys Once gain cheers for the pictures. Paul The buttons should be Half load On off and Door release. Also in your example the drum was different. Lots of memories sat in fron of that machine burning my hands on the door when it was boil washing my brothers nappies LOL!

Nick Its like the 82X, but had 1000rpm. My aunt had one! Remember it wery well. The dials are really nice. Candy used gears on the motor for MANY yers, and it was a great system. Ill take pics of the garsystem on my Alise WD28 which I think I must throw away, because its mouse eaten as soon as I can. Candy isnt crappy at all, you must just use it gently. I know peoples who still have Candys from the 80s, and some of them have never been repaired on. The Formula Inox is a feature, I never have seen on other machines. The outer tub is shaped like a egg. It should save more water and energy because of that. Dont know if it had any effect. I have a 90%complete service manual for the D4 series here, which Ive got from a reapaerman I know wery well. Hes a real Candyman! P He has sold and repaired Candy in many many years. It was one or two fires caused by this, but they were called back, and got new thermostats. I know the guy who got the job to put on those thermostats in the entire Norway. He spend over a year doing this. He went all over the country. And it was ONLY ONE who did this in Norway, therefor it took pretty long time to get finished with a whole country. Bosch or AEG But it could be possible. Thanx Just keep on the good work. Something like Cinderella despairing at cluttered kitchen. I do not understand where the claimed Candy water saving is. In my opinion if you have the bottom part of the tub farer from the drum then you need to have more water to reach the drum itself, isnt it. The more water you have to heat the more is the consumption. There must be not obvious reasons to make such shaped tubs. Video Downloads Digital Millennium Copyright Act Policy Our Privacy Policy.
